# Reflective Cylinder

Designed to provide added high visibility to traffic sign installations where the use of electrical powered illumination is undesirable or impractical.

The cylindrical design allows retroreflection from any angle of approach and is particularly suitable for use with warning signs mounted on traffic islands

The cylinder is manufactured from aluminium and can be finished using either Class 2 or Microprismatic reflective material.

The cylinder is supplied complete with internally mounted fixing brackets and can be specified to fit 76, 89 or 114mm diameter posts.
